

Science Curriculum Overview 2024-2025

Key Skills Working Scientifically- (Disciplinary Knowledge)

	EYFS	Key Stage 1		Lower Key Stage 2		Upper Key Stage 2	
		Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Exploring and Observing	Explore and comment on the natural world around them. Begin to use scientific language.	Begin to use simple scientific language to talk about or record what they have noticed. Use observations to make suggestions and/or ask questions. Look / observe closely and communicate changes over time. Look / observe closely and communicate the features or properties of things in the real world. Observe closely using their senses.	Use simple scientific language to talk about / record what they have noticed. Use observations to make suggestions and/or ask questions. Observe and describe simple processes/cycles/changes with several steps. Observe closely and communicate with increasing accuracy the features or properties of things in the real world.	Observe and record relationships between structure and function. Observe and record changes /stages over time. Explore / observe things in the local environment / real contexts and record observations.	Suggest their own ideas on a concept and compare these with what they observe / find out. Use observations to suggest what to do next. Discuss ideas and develop descriptions from their observations using relevant scientific language and vocabulary. Observe and record relationships between structure and function or between different parts of a processes. Observe and record changes /stages over time.	Use their developing scientific knowledge and understanding and relevant scientific language and terminology to discuss, communicate and explain their observations. Evaluate their observations and suggest a further test, offer another question or make a prediction. Observe (including changes over time) and suggest a reason for what they notice.	Use correct scientific knowledge and understanding and relevant scientific language to discuss their observations and explorations. Identify changes that have occurred over a very long period of time (evolution) and discuss how changes have impacted the world. Explore more abstract systems / functions /changes / behaviours and record their understanding of these.
Grouping and Classifying	Make comparisons between local environment and contrasting ones	Name/identify common examples and some common features. With help, decide how to sort and group objects, materials or living things. Name basic features of objects, materials and living things. Say how things are similar or different. Compare and contrast simple observable features / characteristics of objects, materials and living things.	Name / Identify common examples, some common features or different uses. Sort and group objects, materials or living things by observable and/or behavioural features. Compare and contrast... a variety of things [objects, materials or living things] - focusing on the similarities as well as the differences.	Decide ways and give reasons for sorting, grouping, classifying, identifying things/objects, living things, processes or events based on specific characteristics. Compare and contrast and begin to consider the relationships between different things. Record similarities as well as differences.	Make a simple guide to local living things. Use guides or simple keys to classify / identify [animals, flowering plants and nonflowering plants]. Use their observations to identify and classify. Begin to give reasons for these similarities and differences. Record similarities as well as differences and/or changes related to simple scientific ideas or processes or more complex groups of objects/living things/events.	Suggest reasons for similarities and differences. Compare and contrast things beyond their locality and use these similarities and differences to help to classify. Use secondary sources of information to identify and classify. Decide which sources of information (and/or equipment and/or test) to help identify and classify.	Recognise the importance of classification to the scientific world and form a conclusion from their sorting and classifying. Compare and contrast more complex processes, systems, functions. Construct a classification key / branching database using more than two items. Compare and contrast things beyond their locality and discuss advantages/disadvantages, pros/cons of the similarities and differences. Use research to identify and classify things. Use classification systems, keys and other information records [databases] to help classify or identify things.

Questioning	Ask simple questions about the world around them.	Ask simple questions about what they notice about the world around them. Demonstrate curiosity by the questions they ask.	Raise their own logical questions based on or linked to things they have observed. With help / scaffolds, begin to ask questions such as 'What will happen if...?'	Explore their own ideas about 'what if...?' scenarios e.g. humans did not have skeletons. Ask questions such as 'What if we tried...?' or 'What if we changed...?' Begin to understand that some questions can be tested in the classroom and some cannot. Within a group suggest questions that can be explored, observed, tested or investigated further. Within a group suggest relevant questions about what they observe and about the world around them.	Ask/raise their own relevant questions with increasing confidence and independence that can be explored, observed, tested or investigated further. Ask questions such as 'What will happen if...?' or 'What if we changed...?' Choose/select a relevant question that can be answered [by research or experiment/test.	Recognise scientific questions that do not yet have definitive answers. Refine a scientific question so that it can be tested e.g. 'What would happen to... if we changed...?' Decide whether their questions can be answered by researching or by testing. Independently ask their own scientific questions taking some ownership for finding out the answers.	Recognise scientific questions that do not yet have definitive answers. Refine a scientific question to make it testable i.e. Ask a testable question which includes the change and measure variables - e.g. what would happen to ... if we changed ...? Use observations to suggest a further (testable or research) question. Independently ask a variety of scientific questions and decide the type of enquiry needed to answer them.
Researching	Ask people questions	Ask people questions (e.g. an expert or hotseating). Use simple primary and secondary sources (such as objects, books and photographs) to find things out.	Talk about how useful the information source was and express opinion about findings. Make suggestions about who to ask or where to look for information. Ask people questions to help them answer their questions. Use simple and appropriate secondary sources (such as books, photographs, videos and other technology) to find things out / find answers.	Find things out using a range of secondary sources of information.	Make decisions about which information to use from a wide range of sources and make decisions about how to present their research. Recognise when and how secondary sources might help them to answer questions that cannot be answered through practical investigations.	Find out how scientific ideas have changed/developed over time. Articulate and explain findings from their research using scientific knowledge and understanding. Make decisions about which information to use from a wide range of sources.	Research how scientific ideas have developed over time and had an impact on our lives. Use evidence from a variety of sources to justify their ideas. Recognise which secondary sources will be most useful to research their ideas and begin to separate opinion from fact. Interview people to find out information.
Modelling	N/A in Reception	With help, follow movements (dance / drama) to act out their Science.	Act out something to represent something else about the world around us (e.g a life cycle).	Act out or make a model of something to represent something in the real world using appropriate scientific vocabulary verbally.	Make a visual representation or a model of something to represent something they have seen or a process that is difficult to see. Suggest their own ideas on a concept and compare these with models or images.	Perform / create simple models to exemplify scientific ideas using scientific terminology where appropriate.	Make / perform and use their own versions of simple models to describe and explain scientific ideas.

Collaborating	Work with others on a science task	Share ideas in a group and listen to the ideas of others. Work with others on a science task.	Share ideas in a group and listen to the ideas of others. Work cooperatively with others on a science task making some choices.	Begin to make some decisions about an idea within a group from a list of choices. With help, support, listen to and acknowledge others in the group. Build on / add to someone else's idea. Begin to understand that it is okay to disagree with their peers and offer a reason for their opinion.	Make some decisions about an idea within a group. Increasingly support, listen to and acknowledge others in the group. Build on / add to someone else's idea to improve a plan. Understand that it is okay to disagree with their peers and offer reasons for their opinion	Propose their own ideas and make decisions with agreement in a group. Support, listen to and acknowledge others in the group e.g. Yes. I prefer that one too. Check the clarity of each other's suggestions e.g. are you saying you think this one is a herbivore? Build on / add to someone else's idea to improve a plan or suggestion. Understand that it is okay to disagree with their peers and offer a reason for their opinion.	Propose their own ideas and make decisions with agreement in a group. Support, listen to and acknowledge others in the group. Check the clarity of each other's suggestions. Build on / add to someone else's idea to improve a plan or suggestion. Understand that it is okay to disagree with their peers and offer a reason for their opinion.
Planning and Testing	With an adult to carry out a simple test/comparative test.	With help, carry out a simple test/comparative test. With help, make a simple prediction or suggestion about what might happen. Begin to suggest some ideas. Talk about ways of setting up a test.	Carry out simple comparative tests as part of a group, following a method with some independence. Make a simple prediction about what might happen and try to give a vague reason (even though it might not be correct). With support, make suggestions on a method for setting up a simple comparative test. Talk about a practical way to find answers to their questions.	Help to decide about how to set up a simple fair test and begin to recognise when a test is not fair. Make a prediction based on everyday experience. With support/as a group, set up simple practical enquiries incl. comparative and fair tests e.g. make a choice from a list of things (variables) to change when conducting a fair test. As a group, begin to make some decisions about the best way of answering their questions. Find/suggest a practical way to compare things.	Carry out simple fair tests with increasing confidence investigating the effect of something on something else. Start to make their own decisions about the most appropriate type of science enquiry they might use to answer scientific questions (is a fair test the best way to investigate their question?). Make a prediction based on the knowledge acquired from previous explorations / observations and apply it to a new situation. Explain their planning decisions and choices. Make some of the planning decisions about what to change and measure/observe. Begin to recognise when a fair test is necessary.	Carry out fair tests and other investigations with increasing independence. Suggest more than one possible prediction and begin to suggest which is the most likely. Justify their reason with some knowledge and understanding of the concept. Make decisions about which variables to change, measure and keep the same. Make most of the planning decisions for an investigation. Recognise when it is appropriate to carry out a fair test.	Predict what a graph might look like before collecting results. Make a hypothesis where they say how one thing will affect another and give a reason for their suggestion with a developing understanding of the scientific concept. Identify variables to change, measure and keep the same in order for a test to be fair. Independently plan investigations and explain planning decisions. Decide when it is appropriate to carry out a fair test investigation, comparative test or alternative.

Using Equipment and Measures	As a group, measure using non-standard units e.g. how many lolly sticks/cubes/handfuls, etc.	Measure using nonstandard units e.g. how many lolly sticks/cubes/handfuls, etc. Observe closely, using simple equipment (e.g. hand lenses, egg timers). Use senses to compare different textures, sounds and smells.	Measure using nonstandard and simple standard measures (e.g. cm, time) with increasing accuracy. Begin to make decisions about which equipment to use. Correctly and safely use equipment provided to make observations and/or take simple measurements.	Collect data from their own observations and measurements using notes/ simple tables/standard units. Help to make some decisions about what observations to make, how long to make them for, the type of simple equipment that might be used and how to work safely. Make simple accurate measurements using whole number standard units, using a range of equipment. Gather data in a variety of ways to help in answering questions. Use equipment accurately to improve the detail of their measurements/observations.	Begin to identify where patterns might be found and use this to begin to identify what data to collect. Make more of the decisions about what observations to make, how long to make them for and the type of equipment that might be used. Recognise obvious risks and how to keep themselves and others safe. Learn how to use new equipment, such as data loggers & measure temperature in degrees Celsius (°C) using a thermometer. Collect data from their own observations and measurements, using notes/simple tables/standard units. Make accurate measurements using standard units [and more complex units and parts of units] using a range of equipment and scales.	Make their own decisions about what observations to make or measurements to use and how long to take them for (recognising the need for repeat readings on some occasions). Take measurements using a range of scientific equipment with increasing accuracy and using more complex scales / units. Identify possible risks to themselves and others and suggest ways of reducing these. Choose the most appropriate equipment and make accurate measurements.	Decide whether to repeat any readings and justify the reason for doing so. Make their own decisions about what measurements to take (and begin to identify the ranges used). Make, and act on, suggestions to control/reduce risks to themselves and others. Use equipment fit for purpose to take measurements which are increasingly accurate and precise. Decide the most appropriate equipment to use to collect data.
------------------------------	---	---	---	--	--	---	---

Communicating	Notices and comments on changes in the weather.	Communicate their ideas to a range of audiences in a variety of ways. Complete a preconstructed table / chart using picture records or simple words. Contribute to a class display. Add annotations to drawings or photographs. Begin to use some simple scientific language. Record simple visual representations of observations made.	Record and communicate their findings in a range of ways to a variety of audiences. Use simple scientific language with increasing accuracy. Record simple data with some accuracy to help in answering questions; With support or using frameworks, make decisions about how to complete a variety of tables/charts.	Record and present findings using simple scientific language and vocabulary including simple tables, bar charts (using scales chosen for them). With scaffold / support record, and present data in a variety of ways to help in answering questions. Communicate their findings in ways that are appropriate for different audiences.	Record findings using relevant scientific language and vocabulary including tables and bar charts [where intervals and ranges agreed through discussion]. Begin to select the most useful ways to collect, record, classify and present data from a range of choices. Make decisions on how best to communicate their findings in ways that are appropriate for different audiences.	Use their developing scientific knowledge and understanding and relevant scientific language and terminology to communicate more abstract concepts. Present and explain their findings through talk, in written forms or in other ways for a range of audiences / purposes. Record data and results of increasing complexity using different formats e.g. tables, annotated scientific diagrams, classification keys, graphs and models . Make decisions about the most appropriate way of recording data.	Articulate understanding of the concept using scientific language and terminology when describing abstract ideas, observations and findings. Record data and results of increasing complexity using scientific diagrams and labels, recognised symbols, classification keys, tables, bar and line graphs, and models. Make decisions about how to present and explain their findings through talk, in written forms or in other ways.
Describing Results/Looking for Patterns	Beginning to understand the changes that happen with the seasons. Can understand and describe changes to matter.	Use recordings to talk about and describe what happened. Sequence photographs of an event/observation.	With guidance, begin to notice patterns in their data. Recognise if results matched predictions. Use their recordings to talk about and describe what has happened.	With scaffold/support, describe and compare the effect of different factors on something. With help, look for changes and simple patterns in their observations, data, chart or graph. Use their results to consider whether they met their predictions.	Notice/find patterns in their observations and data. (Describe the effect of something on something else). With some independence, analyse results / observations by writing a sentence that matches the evidence i.e. deciding the important aspect of the result and summarising in a conclusion.	Describe straightforward patterns in results linking cause and effect e.g. using er...er or the word 'more'. Look for / notice relationships between things and begin to describe these. Comment on the results and whether they support the initial prediction.	Spot unexpected results that do not fit the pattern (anomalies). Identify patterns in results collected and describe them using the change and measure variables (causal relationships) (e.g. as we increased the number of batteries the brightness the bulb increased.

Explaining Results	N/A in Reception	. Begin to use simple scientific language to talk about what they have found out or why something happened.	Begin to use simple scientific language to explain what they have found out. Give a simple, logical reason why something happened (e.g. I think ... because ...).	Use their experience and some evidence or results to draw a simple conclusion to answer their original question. Write a simple explanation of why things happened (using the word 'because') and using simple scientific language and vocabulary	Begin to develop their ideas about relationships and interactions between things and explain them. Use relevant scientific language and vocabulary to begin to say/explain why something happened.	Use their scientific KandU and appropriate scientific language and terminology to explain their findings and data and answer their initial question. Draw a valid conclusion (explain why it happened) based on their data and observations.	Identify evidence that refutes or supports their ideas. Independently form a conclusion which draws on the evidence from the test. Use scientific language and terminology to explain why something happened.
Trusting Results	N/A in Reception.	N/A in Year 1.	Begin to discuss if the test was unfair	Say whether what happened was what they expected and notice any results that seem odd. Begin to recognise when a test is not fair and suggest improvements.	Use results to suggest improvements, new questions and/or predictions for setting up further tests. Compare their results with others and give reasons why results might be different.	Begin to recognise how repeated readings improve the reliability of results. Compare results with others and comment on how reliable they are.	Be able to suggest reasons for unexpected results (anomalies). Describe how to improve planning to produce more reliable results. Say how confident they are that their results are reliable and give a reason.
